

Before putting our name on a refurbished unit we submit it to a very strict reconditioning process, which ensures it's been restored to its original technical specifications.

- Magnetoscopic inspection of every weld and repair of detected cracks.

- Repair of the clamping plates' hinges.
- Replacing the seals in the revolving connection.
- • Installation of new hoses and fittings.

- Applying primer and industrial paint on the clamp, according to the chosen color (more than 200 colors).
- Re-assembling the clamp and pressure testing.

Every step of the refurbishing process takes place in l'Assomption, Québec.

All refurbished units are delivered with a certificate from an independent inspection firm, certified by the Canadian Welding Bureau (CWB), stating that the clamp has been through a magnetoscopic inspection, that the cracks detected during the inspection were repaired and that all welds on the clamp are in accordance to the CSA W59-03 norm and to the manufacturer's technical standards.

Every refurbished clamp comes with a six (6) month warranty on parts and labour, without limitation to the hours of operation.
